

Sklopisek Střeleč aims to keep and continue to strengthen its position as a reliable and competitive supplier of high quality sand suitable for use in all areas of industry.

The company uses an integrated management system which is built based on the standards ISO 9001, ISO 14001, OHSAS 45001 and ISO 50001. It therefore provides a high and stable quality, protects the environment and the health and safety of employees. It pledges to be efficient in energy management.

The management of the company pledges to:

- Ensure the sources for efficient quality management, creating safe working conditions and to decrease the company's environmental impact including a decrease in the energy intensity of production.
- Comply with relevant legal and other regulations.
- Continually improve the efficiency of the integrated management systems.
- Actively cooperate with external involved parties active within the reach of the company.

Quality policy

- The main priority is customer orientation, meeting their demands with emphasis on high and long-term quality.
- Increase mutual confidence by preferring personal meetings with customers.
- Keep investing in equipment and technology.
- Maintain and keep developing the management system according to the international standards requirements.

Environmental policy

- Carry out the restoration of land and other activities in a way so that the area of the company coincides with the surroundings of the "Český ráj" Conservation Area as much as possible.
- Maintain the effort to reduce waste production, educate the employees in responsible environmental behaviour and make them fully understand, support and promote the company's environmental policy.
- Focus on prevention from environmental pollution while all activities.
- Economical and responsible use of natural resources and decreasing the environmental impact.
- Constantly improve the company's environmental profile.

Health and safety policy

- Create a safe and healthy working environment and communicate with employees on a regular basis.
- Injury prevention and an effort for minimization of possible risk and danger in individual activities.
- Protect the employees' health and safety and lead them to be responsible for both their own health and their co-workers'.

Energy policy

- Monitor and evaluate energy consumption, decrease its consumption and thus improve our energy efficiency.
- Ensure necessary information and sources for given energy targets fulfilment.
- Promote the purchase of energy-efficient products and services that have an impact on our energy efficiency.

The policy is obligatory for all employees.
